BLOCK STATISTICS FOR CITIES

This volume is composed of eight parts with the cities arranged by States as follows:

Part 1--Alabama-Delaware
- Birmingham
- Mobile
- Montgomery
- Little Rock
- Berkeley
- Fresno
- Glendale
- Long Beach
- Los Angeles
- Oakland
- Pasadena
- Sacramento
- San Diego
- San Francisco
- San Jose
- Denver
- Pueblo
- Bridgeport
- Hartford
- New Britain
- New Haven
- Waterbury
- Wilmington

Part 2--District of Columbia-Indiana
- Washington
- Jacksonville
- Miami
- Tampa
- Atlanta
- Augusta
- Macon
- Savannah
- Chicago
- Cicero
- Decatur
- East St. Louis
- Evanston
- Oak Park
- Peoria
- Rockford
- Springfield
- East Chicago
- Evansville
- Fort Wayne
- Gary
- Hammond
- Indianapolis
- South Bend
- Terre Haute

Part 3--Iowa-Massachusetts
- Cedar Rapids
- Davenport
- Des Moines
- Sioux City
- Kansas City
- Topeka
- Wichita
- Covington
- Louisville
- New Orleans
- Shreveport
- Portland
- Baltimore
- Boston
- Brockton
- Cambridge
- Fall River

Part 3--Iowa-Massachusetts--Con.
- Holyoke
- Lawrence
- Lowell
- Lynn
- Malden
- Medford
- New Bedford
- Newton
- Quincy
- Somerville
- Springfield
- Worcester

Part 4--Michigan-New Hampshire
- Dearborn
- Detroit
- Flint
- Grand Rapids
- Hamtramck
- Highland Park
- Jackson
- Kalamazoo
- Lansing
- Pontiac
- Saginaw
- Duluth
- Minneapolis
- St. Paul
- Kansas City
- St. Joseph
- St. Louis
- Springfield
- Lincoln
- Omaha
- Manchester

Part 5--New Jersey-New York
- Atlantic City
- Bayonne
- Camden
- East Orange
- Elizabeth
- Hoboken
- Irvington
- Jersey City
- Newark
- Passaic
- Paterson
- Trenton
- Union City
- Albany
- Binghamton
- Buffalo
- Mount Vernon
- New Rochelle
- New York City
  - Bronx Borough
  - Brooklyn "
  - Manhattan "
  - Queens "
  - Richmond "
- Niagara Falls
- Rochester
- Schenectady
- Syracuse
- Troy
- Utica
- Yonkers

Part 6--North Carolina-Oregon
- Asheville
- Charlotte
- Durham
- Greensboro
- Winston-Salem
- Akron
- Canton
- Cincinnati
- Cleveland
- Cleveland Heights
- Columbus
- Dayton
- Hamilton
- Lakewood
- Springfield
- Toledo
- Youngstown
- Oklahoma City
- Tulsa
- Portland

Part 7--Pennsylvania-Tennessee
- Allentown
- Altoona
- Bethlehem
- Chester
- Erie
- Harrisburg
- Johnstown
- Lancaster
- McKeesport
- Philadelphia
- Pittsburgh
- Reading
- Scranton
- Wilkes-Barre
- York
- Pawtucket
- Providence
- Charleston
- Columbia
- Chattanooga
- Knoxville
- Memphis
- Nashville

Part 8--Texas-Wisconsin
- Austin
- Beaumont
- Dallas
- El Paso
- Fort Worth
- Galveston
- Houston
- Port Arthur
- San Antonio
- Waco
- Salt Lake City
- Norfolk
- Richmond
- Roanoke
- Seattle
- Spokane
- Tacoma
- Charleston
- Huntington
- Wheeling
- Kenosha
- Madison
- Milwaukee
- Racine

SIXTEENTH CENSUS OF THE UNITED STATES: 1940

REPORTS ON HOUSING

Volume

I. Data for Small Areas, by States.
Supplement: Block Statistics for Cities.
II. General Characteristics of Housing, by States.
III. General Report on Housing.
IV. Home Mortgage Characteristics.
V. Housing and Family Characteristics.
Special Reports.

REPORTS ON POPULATION

I. Number of Inhabitants, by States.
II. Characteristics of the Population, by States.

Volume

III. The Labor Force—Employment, Unemployment, Occupation, Income, by States.
IV. General Report on Population.
V. Internal Migration.
VI. Families.
VII. Supplementary Report—Fertility, Parentage, Mother Tongue, Veterans, etc.
Statistics for Census Tracts (Including Housing Data).
Special Reports.

(Lists tentative, subject to revision)

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

442550—42

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	12,420	-
OCCUPANCY AND TENURE		
All dwelling units	16,473	100.0
Owner occupied	8,889	54.0
Tenant occupied	7,172	43.5
Vacant, for sale or rent	393	2.4
Vacant, other (not for sale or rent)	19	0.1
STATE OF REPAIR AND PLUMBING EQUIPMENT		
All dwelling units	16,473	-
Number reporting	15,564	100.0
With private bath	14,740	94.7
No private bath	824	5.3
Not needing major repairs	15,224	97.8
With private bath	14,473	93.0
No private bath	751	4.8
Needing major repairs	340	2.2
With private bath	267	1.7
No private bath	73	0.5
Not reporting state of repair or plumbing equipment	909	-
Needing major repairs or lacking private bath	1,091	7.0
YEAR BUILT		
All dwelling units	16,473	-
Number reporting	15,977	100.0
1930 to 1940	4,451	27.9
1920 to 1929	10,506	65.8
1900 to 1919	873	5.5
1899 or earlier	147	0.9
Not reporting year built	496	-

SUBJECT	Number	Percent
COLOR OF OCCUPANTS		
Occupied dwelling units	16,061	100.0
White	16,031	99.8
Nonwhite	30	0.2
NUMBER OF PERSONS PER ROOM		
Occupied dwelling units	16,061	-
Number reporting	15,953	100.0
1.50 or less persons per room	15,481	97.0
1.51 or more persons per room	472	3.0
Not reporting number of persons per room	108	-
CONTRACT OR ESTIMATED MONTHLY RENT		
All dwelling units	16,473	-
Number reporting	16,291	-
Total contract or estimated monthly rent (dollars)	648,615	-
Average contract or estimated monthly rent (dollars)	39.81	-
Not reporting contract or estimated monthly rent	182	-
MORTGAGE STATUS		
Owner-occupied dwelling units	8,889	-
Number reporting	8,635	100.0
Mortgaged	6,543	75.8
Free of mortgage	2,092	24.2
Not reporting mortgage status	254	-

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	271,522	-
OCCUPANCY AND TENURE		
All dwelling units	441,454	100.0
Owner occupied	166,933	37.8
Tenant occupied	258,614	58.6

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	36,577	
OCCUPANCY AND TENURE		
All dwelling units	49,154	100.0
Owner occupied	23,100	47.0
Tenant occupied	24,423	49.7
Vacant, for sale or rent	1,474	3.0
Vacant, other (not for sale or rent)	157	0.3
STATE OF REPAIR AND PLUMBING EQUIPMENT		
All dwelling units	49,154	-
Number reporting	45,728	100.0
With private bath	38,613	84.4
No private bath	7,115	15.6
Not needing major repairs	42,729	93.4
With private bath	36,751	80.4
No private bath	5,978	13.1
Needing major repairs	2,999	6.6
With private bath	1,862	4.1
No private bath	1,137	2.5
Not reporting state of repair or plumbing equipment	3,426	-
Needing major repairs or lacking private bath	8,977	19.6
YEAR BUILT		
All dwelling units	49,154	-
Number reporting	46,251	100.0
1930 to 1940	2,236	4.8
1920 to 1929	9,997	21.6
1900 to 1919	17,571	38.0
1899 or earlier	16,447	35.6
Not reporting year built	2,903	-

SUBJECT	Number	Percent
COLOR OF OCCUPANTS		
Occupied dwelling units	47,523	100.0
White	46,710	98.3
Nonwhite	813	1.7
NUMBER OF PERSONS PER ROOM		
Occupied dwelling units	47,523	-
Number reporting	46,974	100.0
1.50 or less persons per room	46,337	98.6
1.51 or more persons per room	637	1.4
Not reporting number of persons per room	549	-
CONTRACT OR ESTIMATED MONTHLY RENT		
All dwelling units	49,154	-
Number reporting	48,324	-
Total contract or estimated monthly rent (dollars)	1,248,389	-
Average contract or estimated monthly rent (dollars)	25.83	-
Not reporting contract or estimated monthly rent	830	-
MORTGAGE STATUS		
Owner-occupied dwelling units	23,100	-
Number reporting	22,158	100.0
Mortgaged	10,550	47.6
Free of mortgage	11,608	52.4
Not reporting mortgage status	942	-

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	7,363	-
OCCUPANCY AND TENURE		
All dwelling units	11,652	100.0

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

452355 O - 42 - 2

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

Block Statistics

Prepared under the supervision of
Dr. LEON E. TRUESDELL
Chief Statistician for Population

UNITED STATES GOVERNMENT PRINTING OFFICE • WASHINGTON • 1942
For sale by the Superintendent of Documents, Washington, D. C.

BUREAU OF THE CENSUS

J. C. CAPT, *Director* (*Appointed May 22, 1941*)

WILLIAM LANE AUSTIN, *Director* (*Retired January 31, 1941*)

VERGIL D. REED, *Assistant Director* HOWARD H. MCCLURE, *Assistant Director*

Population—LEON E. TRUESDELL, *Chief Statistician.*
PHILIP M. HAUSER, *Assistant Chief Statistician.*

Housing Statistics—Howard G. Brunsman.
Occupation Statistics—Alba M. Edwards.
Economic Statistics—A. Ross Eckler.
General Population Statistics—Glen S. Taylor.
Mathematical Adviser—W. Edwards Deming.
Technical Operations—Robert B. Voight.
Mortgage Finance Analyst—Dave Lowery.
Housing Tabulations—Joseph A. Zettler.
Housing Analyst—Edward P. Staudt.
Tabulation Expert—James L. McPherson.
Technical Editing—Bruce L. Jenkinson.
Technical Instructions—Jack B. Robertson.

Administrative Service—ARTHUR J. HIRSCH, *Chief.*
Agriculture—ZELLMER R. PETTET, *Chief Statistician.*
Business—FRED A. GOSNELL, *Chief Statistician.*
Cotton and Oils—RAY HURLEY, *Chief Statistician.*
Field Service—GERALD RYAN, *Chief.*
Geography—CLARENCE E. BATSCHELET, *Geographer.*
Information and Publications—FRANK R. WILSON, *Chief.*
Machine Tabulation—GEORGE B. WETZEL, *Chief.*
Manufactures—THOMAS J. FITZGERALD, *Chief Statistician.*
Mineral Industries—OSCAR E. KIESSLING, *Chief Statistician.*
State and Local Government—CHESTER E. RIGHTOR, *Chief Statistician.*
Statistical Research—CALVERT L. DEDRICK, *Chief Statistician.*
Vital Statistics—HALBERT L. DUNN, *Chief Statistician.*

SIXTEENTH CENSUS OF THE UNITED STATES: 1940

REPORTS ON HOUSING

Volume
I. Data for Small Areas, by States.
Supplement: Block Statistics for Cities.
II. General Characteristics of Housing, by States.
III. General Report on Housing.
IV. Home Mortgage Characteristics.
V. Housing and Family Characteristics.
Special Reports.

REPORTS ON POPULATION

I. Number of Inhabitants, by States.
II. Characteristics of the Population, by States.

Volume
III. The Labor Force—Employment, Unemployment, Occupation, Income, by States.
IV. General Report on Population.
V. Internal Migration.
VI. Families.
VII. Supplementary Report—Fertility, Parentage, Mother Tongue, Veterans, etc.
Statistics for Census Tracts (Including Housing Data).
Special Reports.

(Lists tentative, subject to revision)

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	12,439	-
OCCUPANCY AND TENURE		
All dwelling units	15,183	100.0
Owner occupied	6,966	45.9
Tenant occupied	7,450	49.1
Vacant, for sale or rent	687	4.5
Vacant, other (not for sale or rent)	80	0.5
STATE OF REPAIR AND PLUMBING EQUIPMENT

Ward 5: Block numbered 21 should be numbered 521.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

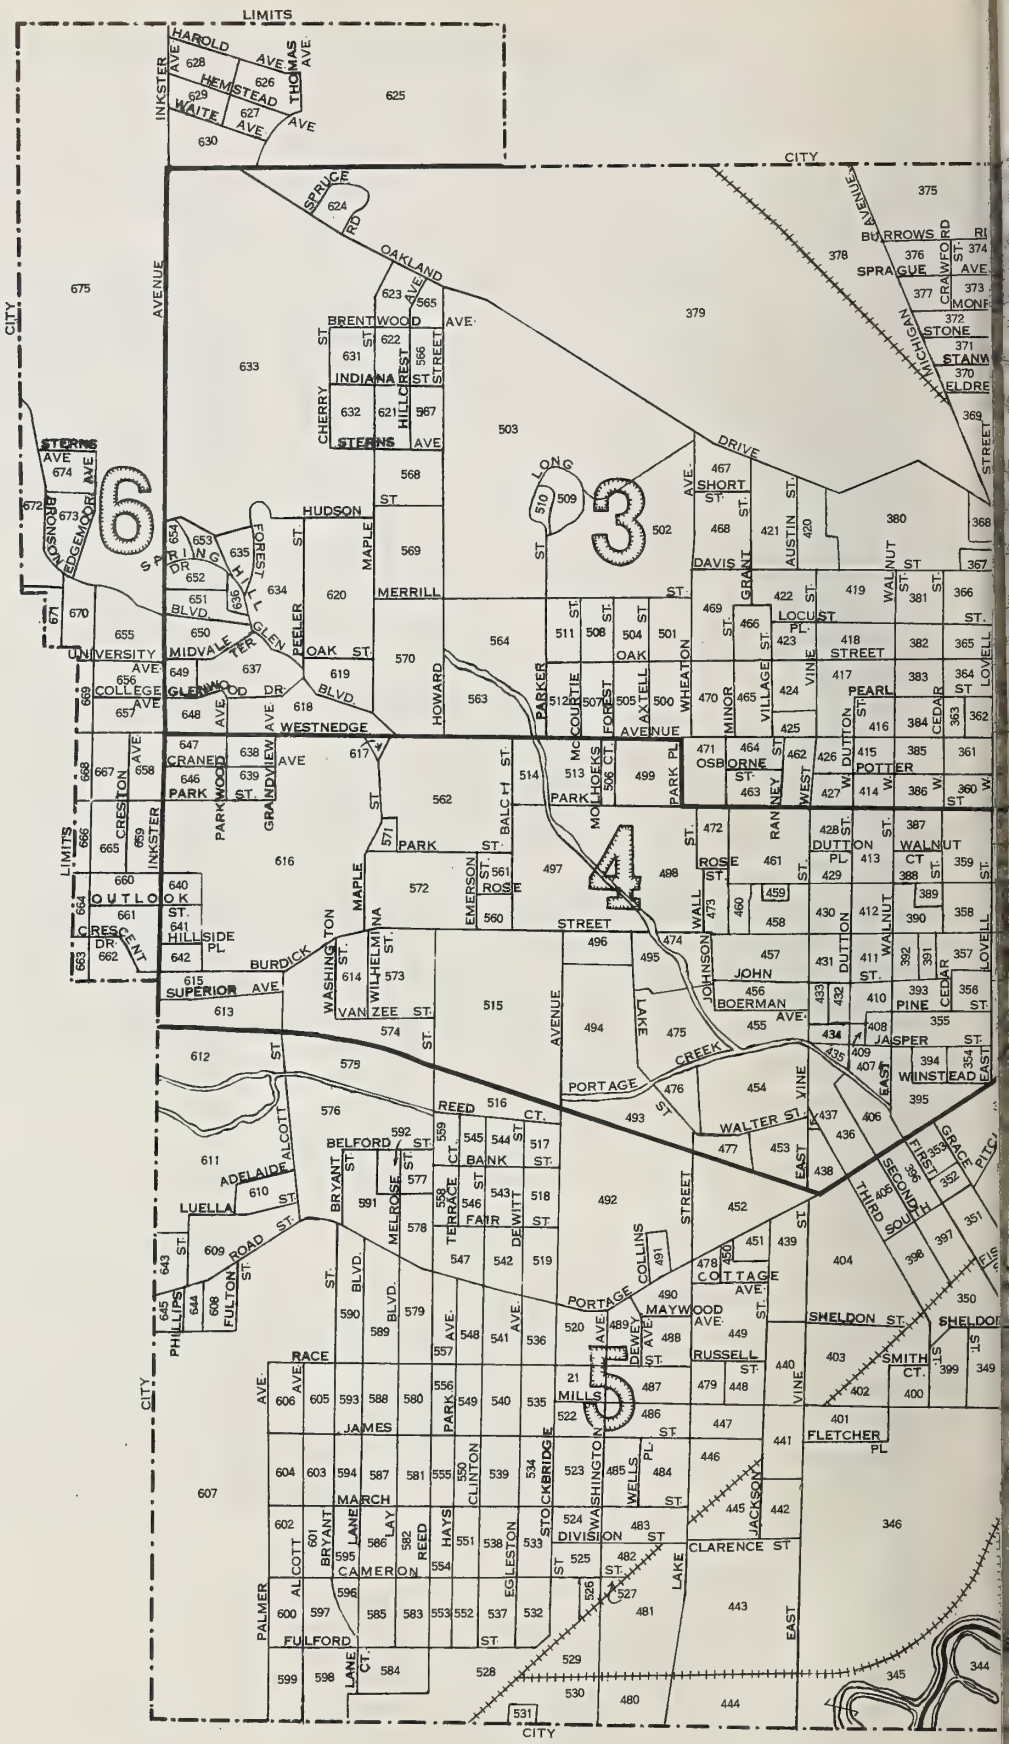

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

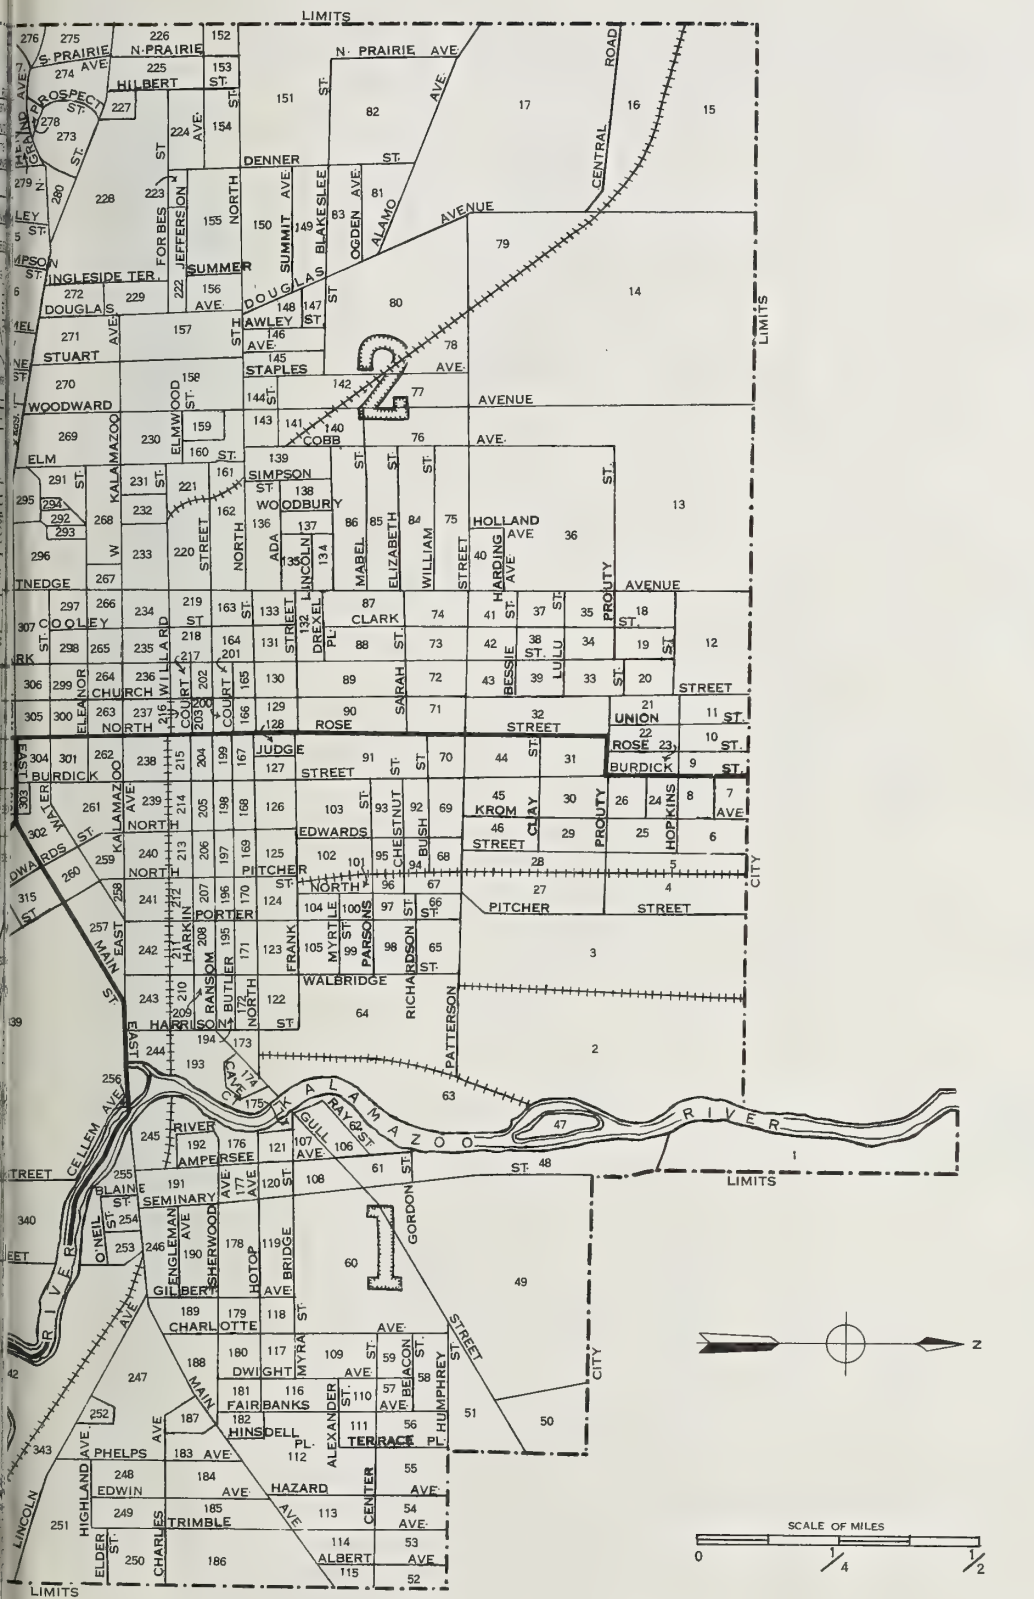

SUBJECT	Number	Percent
All residential structures	12,043	-
OCCUPANCY AND TENURE		
All dwelling units	15,423	100.0

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	18,562	-

TABLE 3.—Characteristics of housing by blocks: 1940	5

Map of city, by blocks, appears following page 10.

The city map was prepared by W. P. A. Project No. 165-2-97-66, New York City.

455415 O - 42

MAP CORRECTION

Part 2: designated as block 452.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "Vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each "block area." Thus the location of each block for which data are presented in table 3 may be determined by referring to the appropriate area and block number shown on the map, which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the block and block area. The block areas are purely arbitrary subdivisions which have been established in order to facilitate the numbering of blocks in groups of less than 1,000. Totals for block areas are not shown because they serve only as a numbering device and have no significance for analytical purposes.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	13,623	-
OCCUPANCY AND TENURE		
All dwelling units	17,618	100.0
Owner occupied	7,592	43.1
Tenant occupied	9,660	54.8
Vacant, for sale or rent	350	2.0
Vacant, other (not for sale or rent)	16	0.1
STATE OF REPAIR AND PLUMBING EQUIPMENT		
All dwelling units	17,618	-
Number reporting	16,504	100.0
With private bath	12,197	73.9
No private bath	4,307	26.1
Not needing major repairs	14,038	85.1
With private bath	11,021	66.8
No private bath	3,017	18.3
Needing major repairs	2,466	14.9
With private bath	1,176	7.1
No private bath	1,290	7.8
Not reporting state of repair or plumbing equipment	1,114	-
Needing major repairs or lacking private bath	5,483	33.2
YEAR BUILT		
All dwelling units	17,618	-
Number reporting	16,479	100.0
1930 to 1940	1,383	8.4
1920 to 1929	8,434	51.2
1900 to 1919	5,361	32.5
1899 or earlier	1,301	7.9
Not reporting year built	1,139	-
COLOR OF OCCUPANTS		
Occupied dwelling units	17,252	100.0
White	16,545	95.9
Nonwhite	707	4.1
NUMBER OF PERSONS PER ROOM		
Occupied dwelling units	17,252	-
Number reporting	17,115	100.0
1.50 or less persons per room	16,243	94.9
1.51 or more persons per room	872	5.1
Not reporting number of persons per room	137	-
CONTRACT OR ESTIMATED MONTHLY RENT		
All dwelling units	17,618	-
Number reporting	17,395	-
Total contract or estimated monthly rent (dollars)	478,345	-
Average contract or estimated monthly rent (dollars)	27.50	-
Not reporting contract or estimated monthly rent	223	-
MORTGAGE STATUS		
Owner-occupied dwelling units	7,592	-
Number reporting	7,381	100.0
Mortgaged	4,410	59.7
Free of mortgage	2,971	40.3
Not reporting mortgage status	211	-

(Table 2 of the standard series is omitted as this city is not divided into wards)

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	19,602	-
OCCUPANCY AND TENURE		
All dwelling units	23,100	100.0
Owner occupied	12,777	55.3
Tenant occupied	9,609	41.6
Vacant, for sale or rent	658	2.8
Vacant, other (not for sale or rent)	56	0.2
STATE OF REPAIR AND PLUMBING EQUIPMENT

SIXTEENTH CENSUS OF THE UNITED STATES: 1940

REPORTS ON HOUSING

Volume
I. Data for Small Areas, by States.
Supplement: Block Statistics for Cities.
II. General Characteristics of Housing, by States.
III. General Report on Housing.
IV. Home Mortgage Characteristics.
V. Housing and Family Characteristics.
Special Reports.

REPORTS ON POPULATION

I. Number of Inhabitants, by States.
II. Characteristics of the Population, by States.

Volume
III. The Labor Force—Employment, Unemployment, Occupation, Income, by States.
IV. General Report on Population.
V. Internal Migration.
VI. Families.
VII. Supplementary Report—Fertility, Parentage, Mother Tongue, Veterans, etc.
Statistics for Census Tracts (Including Housing Data).
Special Reports.

(Lists tentative, subject to revision)

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	20,400	-
OCCUPANCY AND TENURE		
All dwelling units	28,818	100.0
Owner occupied	13,422	46.6
Tenant occupied	14,397	50.0
Vacant, for sale or rent	850	2.9
Vacant, other (not for sale or rent)	149	0.5
STATE OF REPAIR AND PLUMBING EQUIPMENT		
All dwelling units	28,818	-
Number reporting	27,819	100.0
With private bath	20,833	74.9
No private bath	6,986	25.1
Not needing major repairs	22,499	80.9
With private bath	17,997	64.7
No private bath	4,502	16.2
Needing major repairs	5,320	19.1
With private bath	2,836	10.2
No private bath	2,484	8.9
Not reporting state of repair or plumbing equipment	999	-
Needing major repairs or lacking private bath	9,822	35.3
YEAR BUILT		
All dwelling units	28,818	-
Number reporting	28,096	100.0
1930 to 1940	1,174	4.2
1920 to 1929	6,431	22.9
1900 to 1919	14,488	51.6
1899 or earlier	6,003	21.4
Not reporting year built	722	-

SUBJECT	Number	Percent
COLOR OF OCCUPANTS		
Occupied dwelling units	27,819	100.0
White	27,685	99.5
Nonwhite	134	0.5
NUMBER OF PERSONS PER ROOM		
Occupied dwelling units	27,819	-
Number reporting	27,672	100.0
1.50 or less persons per room	26,724	96.6
1.51 or more persons per room	948	3.4
Not reporting number of persons per room	147	-
CONTRACT OR ESTIMATED MONTHLY RENT		
All dwelling units	28,818	-
Number reporting	28,439	-
Total contract or estimated monthly rent (dollars)	776,257	-
Average contract or estimated monthly rent (dollars)	27.30	-
Not reporting contract or estimated monthly rent	379	-
MORTGAGE STATUS		
Owner-occupied dwelling units	13,422	-
Number reporting	12,936	100.0
Mortgaged	6,531	50.5
Free of mortgage	6,405	49.5
Not reporting mortgage status	486	-

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	79,656	-
OCCUPANCY AND TENURE		
All dwelling units	133,157	100.0
Owner occupied	37,761	28.4
Tenant occupied	84,342	63.3
Vacant, for sale or rent	10,769	8.1

MAP CORRECTION

Part 2, Ward 7: Block numbered 142 should be divided into two parts by the continuation of Sixth Street northward to the ward boundary; that part east of Sixth Street should then be numbered 29S.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	17,336	-
OCCUPANCY AND TENURE		
All dwelling units	23,286	100.0
Owner occupied	7,930	34.1
Tenant occupied	13,786	59.2

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city and table 2 contains the basic statistics for census tracts. Table 3 presents the data for blocks in numerical order within tracts. A map showing the boundary streets of the census tracts, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

The statistics presented in the second series of Population and Housing bulletins are shown for the city total and in some detail for the metropolitan district. For each tract city, however, a joint report on population and housing will be issued in which the more important subjects covered in the second series of tabulations will be presented for census tracts.

Census tracts.—Census tracts are small areas into which certain large cities have been subdivided for statistical and local administrative purposes, through cooperation with a local committee. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include approximately equal numbers of inhabitants or equal areas; and each tract is designed to represent an area that is fairly homogeneous in population characteristics. Although the tracted areas of some cities extend into the suburbs, the data shown in this report are restricted to the tracts within the corporate limits of the city.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given

block represents the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodging houses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to

any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each tract. Thus, the location of each block for which data are presented in table 3 may be determined by referring to the tract designation and block number shown on the map which is presented in this Supplement. Similarly, data for a specific block or group of blocks may be readily located in the table if reference is made to the map for the tract designation and block number.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. However, all dwelling units are included in the combined statistics for the city and for each tract.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent

Map of city, by blocks, appears following page 9.

The city map was prepared by W. P. A. Project No. 165-2-97-66, New York City

Springfield, Missouri

MAP CORRECTIONS

Block area letters "A" and "B" should be transposed; that part of the city east of Campbell Avenue should be in block area A, and that part west of Campbell Avenue should be in block area B.
Block area A, Ward 10: The block numbered 316 should be 326.
Ward 14: The block numbered 286 should be 316.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent

Lincoln, Nebraska

MAP CORRECTIONS

Part 1, Ward 1: The block numbered 23 (southeast of block 231) should be numbered 232.
Ward 7, Block area B: Block numbered 22 should be 220.
Ward 12: The block immediately west of block 10 (in the northeastern section of Ward 12) should be numbered 9.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent

TABLES

	Page
TABLE 1.—Characteristics of housing for the city: 1940	5
TABLE 2.—Characteristics of housing by wards: 1940	5
TABLE 3.—Characteristics of housing for wards by blocks: 1940	6

Map of city, by blocks, appears following page 34.

The city map was prepared by W. P. A. Project No. 165-2-97-66, New York City

MAP CORRECTIONS
Omaha, Nebraska

Part 1, Ward 5: The small block immediately north of block 646 should be numbered 636.
Part 2, Ward 2: The block numbered 5N should be 405N.
Ward 3: The block numbered 406N should be 405S.
Ward 3: The small block (now occupied by the designation "23RD") immediately east of block 667 should be numbered 666.
Ward 8, Block area D: The unnumbered block in the extreme southeastern part should be numbered 671.
Ward 10, Block area C: The small block immediately west of block 635 should be numbered 634.
Block area B: The block numbered 622 should be 624.
Part 3, Ward 11, Block area B: The unnumbered block directly north of block 418 should be numbered 388.
Block area B: The block numbered 424 (immediately north of block 264) should be 224.
Block area C: The block numbered 5 (immediately north of block 350) should be numbered 285.
Ward 12, Block area A: The elongated block numbered 46 (immediately south of block 426) should be numbered 460.
Block area A: The block numbered 530 (immediately east of block 645) should be numbered 630.
Block area B: The unnumbered block immediately west of block 20 and bordering the block area boundary should be numbered 21.

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	49,159	-
OCCUPANCY AND TENURE		
All dwelling units	65,726	100.0
Owner occupied	28,672	43.6
Tenant occupied	33,463	50.9
Vacant, for sale or rent	3,502	5.3
Vacant, other (not for sale or rent)	89	0.1
STATE OF REPAIR AND PLUMBING EQUIPMENT

HOUSING

BLOCK STATISTICS

INTRODUCTION

GENERAL

The Supplements to the first series of Housing bulletins include a separate report for each of the 191 cities which in 1930 had a population of 50,000 or more. Each report presents for the city, by blocks, limited tabulations of data obtained in the Housing Census taken as of April 1, 1940, as a part of the Sixteenth Decennial Census of Population. Subjects presented include the number of residential structures; the number of dwelling units classified by occupancy and tenure, year built, color of occupants, number of persons per room, state of repair, and plumbing equipment; the average monthly rent or rental value of dwelling units; and the mortgage status of owner-occupied dwelling units.

Table 1 shows summary figures for the city. Table 2 contains the basic statistics for wards; this table is not shown in the bulletin for a city that is not divided into wards. Table 3 presents the data for blocks in numerical order within wards or block areas. A map showing the ward boundaries, as well as the location of each block, forms a part of the report.

Related reports.—The first series of Housing bulletins, which comprises a separate report for each State, presents limited tabulations of the housing data for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for metropolitan districts, and for counties, incorporated places of 1,000 inhabitants or more, and minor civil divisions. The items shown for nonfarm dwelling units in these areas are the same as the items shown in the city Supplements, except that data on year built are not included in the first series bulletin for the State.

In the second series of Housing bulletins for States, more detailed statistics are presented for the State, for urban, rural-nonfarm, and rural-farm areas in the State, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by the second series include size of household, type of structure, exterior material, year built, number of rooms, lighting equipment, water supply, toilet facilities, bathtub or shower, radio, refrigeration equipment, cooking fuel, heating equipment, heating fuel, value of owner-occupied units, and, for tenant-occupied nonfarm units, gross monthly rent and inclusion of furniture in rent. The more significant items are shown separately for the various occupancy, tenure, and color groups.

The first series of Population bulletins, also issued by States, gives the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Population statistics are not available for city blocks. The second series of Population bulletins presents, for areas similar to those outlined above for the second series Housing bulletins, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born by citizenship and country of birth; and for the labor force by employment status, broad occupation groups, and selected industries.

Use of the data for blocks.—The tabulation of housing characteristics for areas as small as city blocks provides descriptive material of considerable value for technical studies of housing in the city. The statistics will be useful in compiling totals for special types of areas that may be defined to meet the requirements of individual investigators. Users of the data should bear in mind that in practically all cases the data for a given block represent the work of only one enumerator. Consequently, the qualitative housing characteristics are subject to a wider margin of error than is to be expected in the figures for tracts or wards, which represent returns made by a number of enumerators. This qualification applies particularly to the number of dwelling units reported as needing major repairs, since the enumeration of this item depended to a considerable extent upon the judgment of individual enumerators. The misinterpretation by one enumerator of instructions pertaining to a particular item may cause a significant bias in the statistics for a very small area, even though it would have a negligible effect upon the figures for larger areas. Occasional failure to indicate the correct block number for a significant number of dwelling units may also introduce errors into the block data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Dwelling unit.—A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather

than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on families. Dwelling units occupied by officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

The fact that the premises occupied by hotel and institutional groups are excluded from the statistics presented for occupied dwelling units should be considered in comparisons of the statistics on population and housing for a given area. The population in institutions may account for a large proportion of the total population of a small area.

Residential structure.—A residential structure is a building that contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, but a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Occupancy and tenure.—Dwelling units are classified by occupancy and tenure into four groups: Owner-occupied; tenant-occupied; vacant, for sale or rent; and vacant, other (not for sale or rent). Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. A dwelling unit is owner-occupied if it is owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent is actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

The group "Vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though not actually offered in the housing market at the time of enumeration. Dwelling units in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units in the city that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "Vacant, not for sale or rent" represents chiefly dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. Dwelling units occupied temporarily by nonresident households are also included in this category.

Year built.—Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. In this report two categories are presented, "white" and "nonwhite." The classification "White" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Persons per room.—The number of persons per room, used as an index of crowding, has been computed for each occupied unit. The number of dwelling units classified as having more than one and one-half persons per room is shown for each area. All persons enumerated in the Population census as members of the household (including lodgers, servants, and other nonrelated persons) are counted in determining the number of persons that occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms avail-

able for use throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement and attic are not counted as rooms.

State of repair and plumbing equipment.—Instructions to enumerators specified that dwelling units were to be classified as "needing major repairs" when repairs were needed on such parts of the structure as floors, roof, plaster, walls, or foundations, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are tabulated in combination with selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported. In table 3 the phrase "needing major repairs" has been shortened to "needing repair" because of the space limitation.

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in each block is obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which these items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas, the average rent may be relatively high for this reason.

Mortgage status.—The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied units are classified by color of occupants. The corresponding percentage distributions shown for these items in table 1 are based on all dwelling units and all occupied units, respectively. For other subjects, such as state of repair and plumbing equipment, the percentages shown are based on the dwelling units for which specific characteristics are reported, that is, the total shown as "number reporting." The number of dwelling units for which the enumerator obtained no report on a particular item is shown for the city totals only; however, the corresponding figures can easily be derived for each area presented in tables 2 and 3 by subtracting the number reporting from the total number of dwelling units (or total occupied) shown for the area.

Use of map.—Block identification.—Blocks are identified by serial numbers, a separate series of numbers being used for each ward or for a group of wards. Thus the location of each block for which data are presented in table 3 may be determined by referring to the ward designation and block number shown on the map which appears at the end of this Supplement. Similarly, data for a specific block may be readily located in the table if reference is made to the map for the identification numbers of the ward and block.

In some instances "block-areas," which have been established to facilitate the numbering of blocks in groups of less than 1,000, cause a break in the sequence of block numbers within a ward. Where this occurs each part that is in a separate block area is distinguished on the map, and in the table the data are shown for blocks in numerical order within each block area section of the ward. Occasionally, when the boundary of a ward cuts through the middle of a block, separate segments of the block are identified on the map by suffix letters not shown on the table. For example, if block 46 is divided into two parts by a ward boundary, the northern part in ward 6 is shown on the map as block 46N, but in the table it is identified simply as block 46 in ward 6.

If no dwelling units are reported for a block, the block number is not listed in table 3, although it is shown on the map. Dwelling units for which the block number was not reported are indicated in the table by the symbol "NR." It will be noted that detailed data are not shown for such dwelling units, nor for blocks containing fewer than three dwelling units. All dwelling units are included, however, in the statistics for the city and for each ward.

Table 1.—CHARACTERISTICS OF HOUSING FOR THE CITY: 1940

SUBJECT	Number	Percent
All residential structures	11,018	-
OCCUPANCY AND TENURE		
All dwelling units	22,204	100.0
Owner occupied	6,612	29.8
